LAB 5

Lab Title: Servlet as controller in Java EE.

Objective:

To understand the role of servlet as a controller.

Theory:

Servlets handle client requests and control application flow. They pass data to JSP pages for presentation. This follows the MVC architecture.

Program code (servlet):

```
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;

public class DemoServlet extends HttpServlet {
    protected void doGet (HttpServletRequest req, HttpServletResponse res)
        throws ServletException, IOException {
        req.setAttribute("msg", "Hello from Servlet");
        RequestDispatcher rd = req.getRequestDispatcher("demo.jsp");
        rd.forward(req, res);
    }
}
```

Conclusion:

Servlets act as controllers between model and view. They help manage application flow.
