Date of Submission:

LAB 6

Lab Title: Prepared Statement in JDBC.

Objective:

To insert records using Prepared Statement.

Theory:

Prepared Statement improves performance and security. It prevents SQL Injection attacks. Queries are precompiled.

Program Code:

```
import java.sql.*;  
class InsertData {  
    public static void main (String[] args) {  
        try {  
            Connection con = DriverManager.getConnection (  
                "jdbc:mysql://localhost:3306/testdb", "pookie", "u");  
            PreparedStatement ps =  
                con.prepareStatement ("INSERT INTO student VALUES (?,?)");  
            ps.setInt (1,1);  
            ps.setString (2, "John");  
            ps.executeUpdate ();  
            con.close ();  
        } catch (Exception e) {  
            System.out.println (e);  
        }  
    }  
}
```

Conclusion:

Prepared Statement is safer and faster than Statement. It is prepared for database operations.
